

AIMO Proof Pilot — Final Grade

Problem (#_ID): 2_ALTORO

Submission: model_3

Scoring scale (0/1/6/7) — two binary decisions:

Step 1. Is the solution essentially complete?

- If **no**: award **1** for significant partial progress, otherwise **0**.
- If **yes**: award **7**, or **6** if there is a minor error or omission.

Grade against the **markscheme** (docs/markschemes.pdf).

1. Final mark

Final mark (choose one):

2. Reasoning

Justify the mark with explicit reference to the markscheme points (e.g. **ME1**) where possible.

The solution attempts a coordinate computation but never carries it out exactly: Q is given only as a decimal approximation with no intersection calculation, the identification of P on the nine-point circle is merely asserted, and the final ratio is reconstructed from a decimal as $11/8$ — which is wrong (the exact value is $125/91$, giving 216 rather than 19). Since the markscheme's exact-computation requirement for a coordinate solution is not met and none of the partial-progress milestones is reached, it scores **0**.
