

AIMO Proof Pilot — Final Grade

Problem (#_ID): 2_ALTORO

Submission: team_5

Scoring scale (0/1/6/7) — two binary decisions:

Step 1. Is the solution essentially complete?

- If **no**: award **1** for significant partial progress, otherwise **0**.
- If **yes**: award **7**, or **6** if there is a minor error or omission.

Grade against the **markscheme** (docs/markschemes.pdf).

1. Final mark

Final mark (choose one):

2. Reasoning

Justify the mark with explicit reference to the markscheme points (e.g. **ME1**) where possible.

A complete coordinate attempt that reaches a numerically correct expression

$$\frac{PQ^2}{PE^2} = \frac{8855^2 \cdot 625 \cdot 2304}{576 \cdot 103891471684},$$

but several coordinate steps and the PE^2 relation are not fully justified, and the expression is never simplified to the final answer. This omission is comparable to **ME2**, so the solution is docked to 6.
